Project Objective

The objective of this project is to develop a BI platform that enables the visualization of information on the performance of Brazilian states and municipalities in the State of São Paulo in foreign trade, based on open data from the Ministry of Development, Industry, Trade, and Services. This tool will provide decision-makers with clear and accessible data, allowing the identification of municipalities that are rising, stagnating, or declining in the international market.

Sprint Backlog

Sprint 2 – Focus on Economic and Logistics Structure

User Story

As a public decision-maker, I want improvements in the visualization of charts so that I can view the Top 5 and quickly identify the main trade partners and key regions in the operations.

As a public decision-maker, I want to filter the cities of the State of São Paulo by Metropolitan Regions for better visualization.

As a public decision-maker, I want to understand whether municipalities concentrate their exports in a few products or have a diversified export portfolio, in order to reduce dependency risks.

As a public decision-maker, I want to map the main transportation routes used to assess infrastructure costs and bottlenecks.

Sprint Backlog

As a public decision-maker, I want to understand the seasonality of exports to adjust inventory and production according to international demand.

As a public decision-maker, I want to search for shipments by SH4 code and apply custom filters for specific analyses.

As a public decision-maker, I want to evaluate the competitiveness of exported products to measure price and quality in relation to international competitors.

As a public decision-maker, I would like to access a statistics dashboard with interactive graphical visualization of the trade balance from 2023 to 2025.

As a public decision-maker, I want all data to be delivered in English so that it can be used in international reports.

Sprint Results

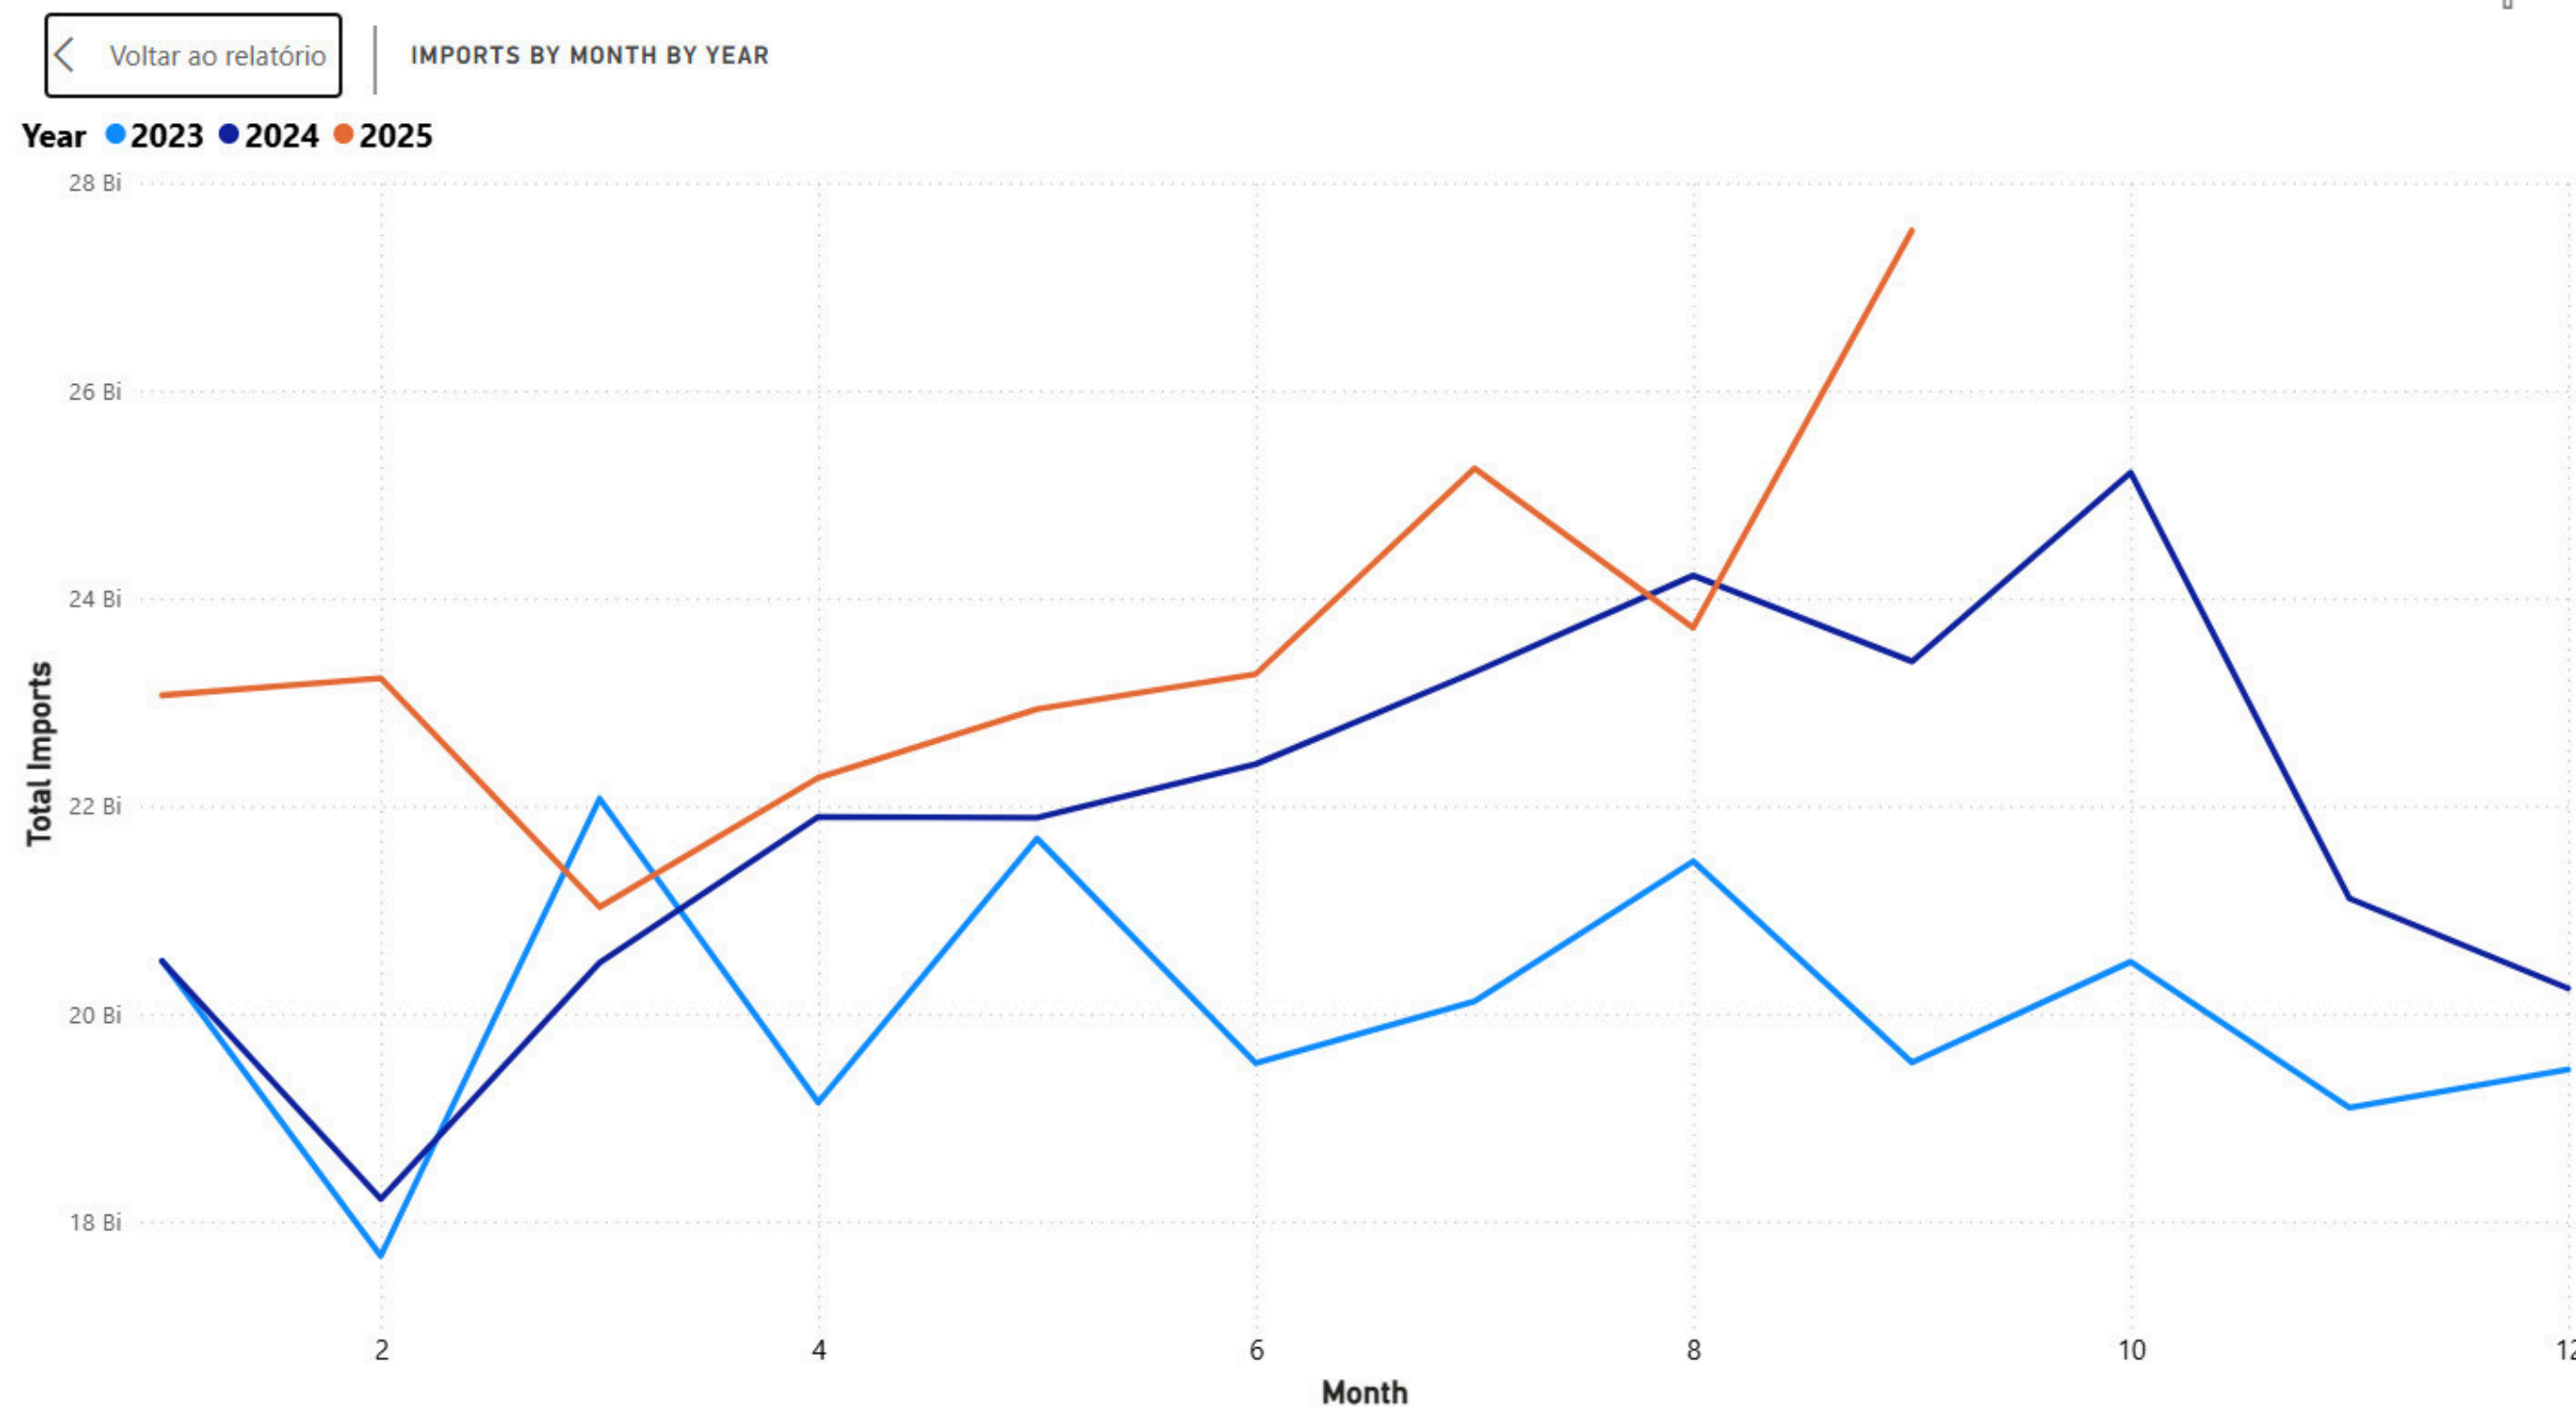

- Implemented analysis of Diversified Export Portfolio to measure municipalities' dependency risk.
- Mapping of Main Transport Routes to assess infrastructure bottlenecks and Custo Brasil.
- Analysis of Export Seasonality to optimize production planning and inventory.

Sprint Results

- Filter by Metropolitan Regions for localized insights.
- Search and filter by SH4 Product Code for deep product performance analysis.
- Interactive statistical panel showing the Trade Balance from 2023 to 2025.
